

## Features & Benefits

- › Eliminates paper with electronic inspection forms that are easy to store and retrieve by your users
- › Makes inspections more efficient with customized forms by vehicle type that ensure correct information is captured, allowing for an efficient Pass/Fail process while circling the vehicle
- › Enforces Pre- and Post-inspection compliance with login and logout integration on the driver's ERS MobilePlus mobile device.
- › Allows drivers to call up previous inspections from their ERS MobilePlus device when required to show them to regulatory inspectors
- › Provides automatic email notification to supervisors and mechanics when there are issues with a vehicle
- › Enforces supervisor override on non-critical issues they deem acceptable before the driver can leave with the vehicle
- › Includes a vehicle inspection portal that allows you to log into the system to view information about your facility, vehicles, and inspections
- › Displays a convenient summary screen showing a count of the minor and major issues, plus an indicator if the vehicle is not drivable
- › Outlines to your mechanics what issues need to be resolved, and lets them update those issues when resolved

# VEHICLE INSPECTIONS

## Concerned about the safety of your drivers?

The AXIS ERS Vehicle Inspection module makes it possible for you to easily virtualize and streamline your vehicle inspections. It saves time by asking your drivers only the relevant questions, while complying with strict customer safety legislation. Instant notification of issues to supervisors and mechanics reduces downtime of vehicles, getting your vehicles back on the road quicker.

All vehicle inspections are accessible through our Vehicle Inspection Portal which allows drivers, supervisors, and mechanics instant access to a vehicle's history, eliminating time-consuming manual tracking. Resolution of issues are tracked via the same portal, allowing a complete picture of a vehicle's status and ensuring issues are being resolved efficiently.

### Setting up Vehicle Inspections

You can customize your vehicle inspection forms based on vehicle type (for example, tow truck, flat bed, or driver training car) and on when you want a Pre- or Post-inspection completed. You specify a checklist of questions and the order in which they appear on the inspection form. You can also require the driver to enter a comment when they identify an issue, and specify how long inspections are retained for historical purposes.

### The Vehicle Inspection Portal

The Vehicle Inspection Portal displays information about your vehicles and inspections. To view a summary, you can select a vehicle and view all of the inspection forms for that vehicle. This shows a count of all the minor and major issues on an inspection, as well as whether the vehicle is drivable or not. If one or more critical issues are flagged on the inspection, the vehicle is considered not drivable.

### Filling out Inspection Forms

When a driver logs into ERS MobilePlus they will be re-directed to the Vehicle Inspection Portal and the appropriate inspection form will be automatically presented to the driver, based on their driver and vehicle ID. During an inspection, drivers will update the form indicating if each item is in good working order, or that there is an issue. Users can log directly into the portal where they too can perform inspections or view previous inspections. The start and end times for the inspections are recorded for review.

When a critical item, or an item that is required to be in good working order, is marked as an issue, the driver can either continue and complete the inspection or log out if the vehicle is unusable. If the driver completes the inspection, they are presented with a list of all the issues the driver has identified. The driver can then update any of the issues and log out if there are still issues remaining. When they log out, the inspection issues are emailed to the supervisor and/or mechanic, and the driver can log into another vehicle and perform a new inspection.

If no items are marked as critical issues, and the vehicle can be used, the driver is shown a list of minor issues that do not prevent the vehicle from leaving and do not need approval. The driver can make further changes, as needed. When applicable, a list of items that require supervisory approval is displayed.

## Supervisor Overrides

Supervisors can override any issues on a vehicle and approve a vehicle to be driven for any non-critical issues. They can use the Vehicle Inspection Portal to review a summary of issues, either by a specific vehicle, or for the entire fleet. Additionally, you can review the resolutions made by your mechanics and print previous inspection forms.

## Resolving Issues

Users that are defined as mechanics can view vehicle inspection forms through a workspace where they can view the complete inspection, or only the issues. They can mark issues as resolved, enter comments, a resolution, and costs. Plus, any updates include who resolved the issue and the date and time when it was resolved.
